Preselected night cases: object detection and a negative-frame check

Pink GT | cyan nearest candidate (solid if assigned at 0.30) | orange: unmatched predictions under annotation protocol

scene-1059 | LiDAR

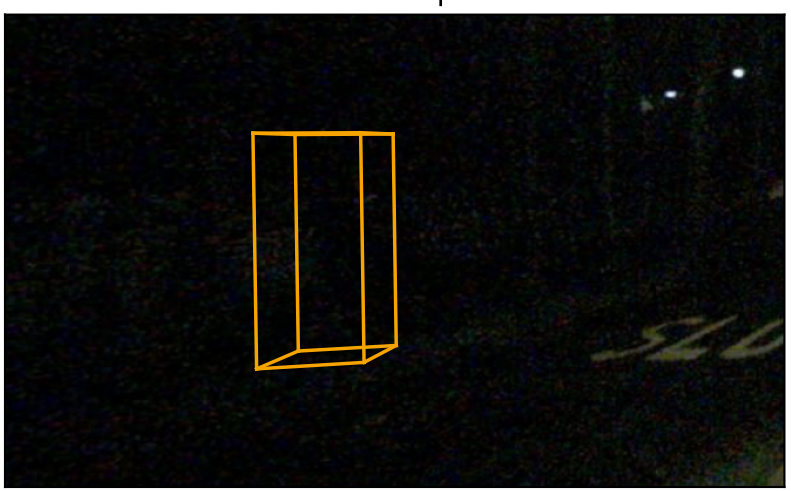

car | score 0.743 | XY error 0.061 m
MATCH at 0.30 | frame TP/FP/FN: 2/0/2

scene-1059 | Fusion

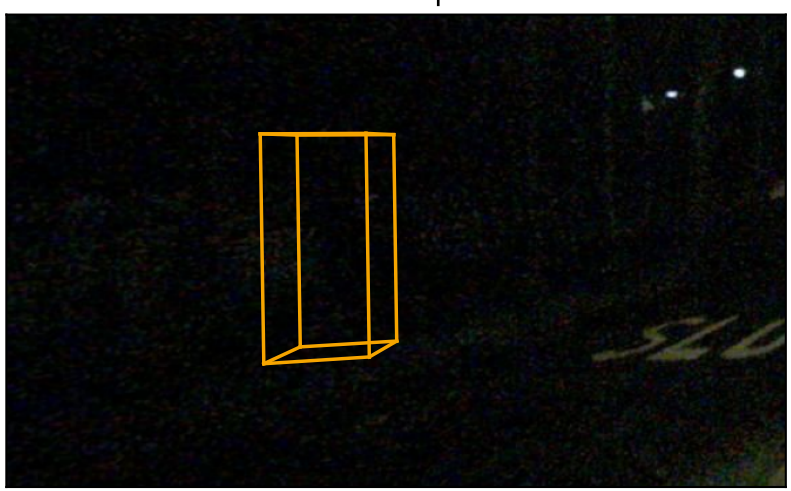

car | score 0.758 | XY error 0.071 m
MATCH at 0.30 | frame TP/FP/FN: 2/0/2

scene-1060 | LiDAR

No evaluable GT | frame FP at 0.30: 1
Unmatched-candidate crop; counts cover full 360° frame

scene-1060 | Fusion

No evaluable GT | frame FP at 0.30: 1
Unmatched-candidate crop; counts cover full 360° frame

Different scenes do not isolate illumination or rain effects. Negative-frame recall is undefined, not 100%.
Original images shown without brightness enhancement. Single-view projections omit object-motion compensation and occlusion tests.
